

Gavin Gillespie

Technical Consultant

Microsoft • Azure • Linux • Networking • Automation

PROFESSIONAL PROFILE

Technology has always interested me because I enjoy understanding how things work. That curiosity began long before my career in IT and continues to shape how I approach every technical challenge. Over the last six years I've progressed from Service Desk Analyst to Technical Consultant, supporting Microsoft, Linux and Azure environments while continually looking for opportunities to improve the way people work through automation, documentation and knowledge sharing. Outside of work I maintain a Linux, Docker and UniFi home lab to keep learning and expanding my infrastructure skills.

CAREER HIGHLIGHTS

- **Linux Automation Framework**

Designed and developed a Bash automation framework for post-migration Ingres housekeeping, reducing execution time from **40 minutes to 5 minutes** (87.5%) across 74 managed cloud environments through validation, structured logging and a What-If mode.

- **Azure API Process Improvement**

Documented and delivered training for an existing Azure API unlinking/relinking PowerShell automation, reducing execution time from **90 minutes to 40 minutes** and contributing to approximately **162 engineering hours** saved.

- **Engineering Beyond Work**

Designed and maintain a production-style UniFi and Linux home infrastructure to continually develop networking, Docker and automation skills.

CORE TECHNICAL SKILLS

Microsoft: Microsoft 365, Entra ID, Active Directory, Intune, Exchange Online, Azure Virtual Desktop, Windows Server

Linux: RHEL, Ubuntu, Linux Mint, Arch Linux, Bash, Python, Git, Cron

Infrastructure: Docker, CasaOS, Nginx, Apache Tomcat, Ingres, SQL

Networking: Fortinet, Juniper, MikroTik, UniFi, TCP/IP, DNS, DHCP, Routing & Switching

PROFESSIONAL EXPERIENCE

Technical Consultant II | MRI Software

January 2024 – Present

Provide technical consultancy across enterprise Linux, Windows and Ingres environments, supporting migrations, upgrades and business-critical production systems.

- Designed and developed a Bash automation framework to automate post-migration Ingres housekeeping, reducing manual engineering effort from approximately 40 minutes to 5 minutes per environment.
- Built validation, structured logging and a comprehensive What-If mode to improve operational safety and consistency.
- Produced documentation and delivered training for an existing Azure API unlinking/relinking PowerShell automation, reducing execution time from approximately 90 minutes to 40 minutes.
- Investigate Priority 1 incidents using structured troubleshooting and root cause analysis.
- Produce operational documentation and knowledge articles to improve engineering consistency.

Network Engineer | Telefónica Tech

2022 – 2023

Delivered customer-facing network engineering across project deployments and BAU support.

- Configured and deployed Fortinet firewalls, Juniper networking equipment and MikroTik routers.
- Supported new customer site deployments from configuration through installation and commissioning.
- Provided remote support for customer self-installations and resolved connectivity issues.
- Balanced project delivery alongside BAU support, developing strong planning and time management skills.

Technical Services Analyst | Telefónica Tech

2021 – 2022

Supported over 12,500 users across healthcare and managed service environments.

- Resolved 30–40 incidents per day while consistently meeting healthcare SLAs.
- Produced documentation and troubleshooting guides to improve first-line resolution and reduce unnecessary escalations.
- Recognised by management for documentation skills and regularly supported the onboarding and mentoring of new Service Desk analysts.

Service Desk Analyst | Capita

2020 – 2021

Built the enterprise IT foundations that launched my career.

- Supported Active Directory, Microsoft 365, Intune, Okta and Windows environments.
- Performed workstation imaging, Outlook profile rebuilds, account administration and desktop troubleshooting.
- Supported the rollout of Microsoft Intune MFA and authored the Service Desk deployment guide.

ENTERPRISE HOME LAB

Designed and maintain a self-hosted infrastructure to continually develop enterprise infrastructure skills. Built around a UniFi Cloud Gateway, Switch Lite PoE and U6+ access point with dedicated Trusted, Guest and IoT networks. Services include Docker, CasaOS, Vaultwarden, Plex, Jellyfin, Kavita, Apache Guacamole and Nginx reverse proxy running across a ZimaBoard and Ubuntu server.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Fortinet NSE1
- Networking Essentials
- Access Diploma in Computing for the Economy
